

Each of the following free body diagrams represents a different problem. From the given data, solve for the missing quantities. Complete solutions for each problem should be shown (use a separate sheet if necessary).

<p>1)</p>  <p>$F_{\text{net}} = +16 \text{ N}$</p> <p>$a = \frac{+16 \text{ N}}{8 \text{ kg}}$</p> <p>$= +2 \frac{\text{N}}{\text{kg}}$</p> <p>or</p> <p>$+2 \frac{\text{m}}{\text{s}^2}$</p>	<p>2)</p>  <p>$F_{\text{net}} = -10 \text{ N}$</p> <p>$a = \frac{-10 \text{ N}}{2 \text{ kg}}$</p> <p>$= -5 \frac{\text{m}}{\text{s}^2}$</p>	<p>3)</p>  <p>uniform motion</p> <p>$F_{\text{net}} = 0$</p> <p>$a = 0$</p> <p>$F = +10 \text{ N}$</p>
<p>4)</p>  <p>$a = \text{zero}$ type of motion = uniform</p> <p>$F_{\text{net}} = 0$</p> <p>$F = -20 \text{ N}$</p>	<p>5)</p>  <p>$F_{\text{net}} = -8 \text{ N}$</p> <p>$a = \frac{-8 \text{ N}}{2 \text{ kg}}$</p> <p>$= -4 \frac{\text{m}}{\text{s}^2}$</p>	<p>6)</p>  <p>$F_{\text{net}} = +2 \text{ N}$</p> <p>$a = \frac{+2 \text{ N}}{2 \text{ kg}}$</p> <p>$= +1 \frac{\text{m}}{\text{s}^2}$</p>

$$F_{\text{net}} = +16 \text{ N}$$

$$a = \frac{+16 \text{ N}}{10 \text{ kg}} = +1.6 \frac{\text{N}}{\text{kg}}$$

$$a = 2.0 \text{ m/s}^2 \rightarrow = +2.0 \frac{\text{m}}{\text{s}^2}$$

$$F_{\text{net}} = m \cdot a = (10 \text{ kg})(+2.0 \frac{\text{m}}{\text{s}^2}) = +20 \text{ N}$$

$F =$

$$F_{\text{net}} = (+F) + (-5 \text{ N})$$

$$+20 \text{ N} = F - 5 \text{ N}$$

$$+20 \text{ N} + 5 \text{ N} = F$$

$$\therefore F = +25 \text{ N}$$

$$a = 2.0 \text{ m/s}^2 \leftarrow = -2.0 \frac{\text{m}}{\text{s}^2}$$

$$F_{\text{net}} = m \cdot a = (10 \text{ kg})(-2.0 \frac{\text{m}}{\text{s}^2}) = -20 \text{ N}$$

$F =$ impossible
 \downarrow
 F_{net} must be -15 N
 for F_{net} to be -20 N ,
 which is impossible if
 F is pushing to right.

$$F_{\text{net}} = 7.5 \text{ N [East]}$$

$$a = \frac{F_{\text{net}}}{m} = \frac{+7.5 \text{ N}}{15 \text{ kg}} = 0.5 \text{ N [E]}$$

$$F = 12.5 \text{ N [W]}$$

$$v_1 = 6 \text{ m/s [East]} = +6 \frac{\text{m}}{\text{s}}$$

$$v_2 = 6 \text{ m/s [West]} = -6 \frac{\text{m}}{\text{s}}$$

$$\Delta t = 4.0 \text{ s}$$

$$a = \frac{v_2 - v_1}{\Delta t} = \frac{-6 \frac{\text{m}}{\text{s}} - (+6 \frac{\text{m}}{\text{s}})}{4.0 \text{ s}}$$

$$= \frac{-12 \frac{\text{m}}{\text{s}}}{4.0 \text{ s}} = -3 \frac{\text{m}}{\text{s}^2}$$

$$F_{\text{net}} = m a = (80 \text{ kg})(-3 \frac{\text{m}}{\text{s}^2}) = -240 \text{ N}$$

$$= 240 \text{ N [W]}$$

$$F = 290 \text{ [W]}$$

$$a = 1.7 \text{ m/s}^2 \leftarrow = -1.7 \frac{\text{m}}{\text{s}^2}$$

$$\Delta t = 5.0 \text{ s}$$

$$F_{\text{net}} = m a = (10 \text{ kg})(-1.7 \frac{\text{m}}{\text{s}^2}) = -17 \text{ N}$$

$$F = -18 \text{ N}$$

$$\Delta v = \downarrow$$

$$a = \frac{\Delta v}{\Delta t}$$

$$\therefore \Delta v = a \cdot \Delta t = (-1.7 \frac{\text{m}}{\text{s}^2})(5.0 \text{ s}) = -8.5 \frac{\text{m}}{\text{s}}$$
