

## GETTING INPUT FROM THE USER: PROGRAMMING EXERCISES

1. Create a **Mathematical Operators** application that allows users to enter two numbers into text boxes and then gives them the option to select a mathematical operator which the program will use to perform calculation.

Save the program as **Mathematical Operators** in your UNIT 2 folder.

2. Create a **Birthday** application that allows users to enter their first name, last name, the current year and their year of birth in text boxes and then outputs the person's full name and the age he/she will be turning this year in a label as follows:

Remember to use the **&** symbol to concatenate (or join) the user's first name, last name and age and output the sentence in a label.

Save the program as **Birthday** in your UNIT 2 folder.
