

Scientists (including science teachers) use a variety of devices in their job. Some are for measuring or storing a substance, while others are for the scientist's personal safety. The following are but a few of those devices. As you watch the "Lab Safety" video the host will describe/present a majority of these objects. Your task is to write the name of each device in the space below each diagram. It might be wise to work with a partner on this activity!
